

The figure displays 15 time series plots arranged in a 3x5 grid. Each row corresponds to a method (1-5) and each column to a data type (raw, avg, thrs). The x-axis represents iterations from 0 to 1000. The y-axis ranges from -10 to 10. The 'raw' data shows high-frequency noise. The 'avg' data shows a smoothed version of the raw data. The 'thrs' data shows a clear upward trend for methods 1-4, while method 5 remains relatively flat.
